SILANOS
QUALITY MADE EASY

Hood Dishwasher

Silanos hoods are designed to make it easier for the operator to use the machine, with a suitable height for linear work using our range of entrance/exit tables that can be customised as needed.

The Mickey system allows for smooth opening/closing movements and prevents users from forcing the hood onto a poorly placed basket or on body parts accidentally placed in the machine.

This system passed a life test (100,000 openings) without showing any signs of significant wear thanks to innovative antifriction technopolymers in teflon and acetalic resin.

Tilted hood roof to avoid dripping on dishes and glasses at the end of a cycle
Fluid and cushioned opening to prevent drops falling on the dishes.

Back chimneys for vapour removal and to reduce pressure in the washing chamber.

Closure for energy saving - the hood can be almost completely lowered to keep the temperature without resorting to an empty cycle.

The ergonomic handle with a 25-mm diameter was extended to the entire range making it easier for the user to hold.
